What to Expect

Now that you've completed your purchase and are awaiting your delivery, we'll go through the process of what you can expect next.

Tracking your shipment: As soon as your order ships, you will receive tracking information. This information is supplied to us from the warehouse around 7:00PM EST on the day that your shipment is picked up. Your account will be updated with the Tracking Number and Carrier Company name. This information will be emailed to you as soon as we receive it.

Delivery: Once the shipment arrives at the terminal, a representative from the Carrier Company will call to arrange a delivery appointment. Please ensure that you have provided us with the correct contact info and address. This only applies to Residential deliveries. Business deliveries will receive the shipment without notification unless otherwise specified in your order notes.

Receiving: When your delivery arrives, visually inspect the delivery for any signs of obvious damage. If you see damage, report it to the driver and take pictures. The driver will call the dispatch office and receive an exception number, which he/she will write on the BOL (Bill of Lading) and give to you. We will need a copy of the BOL with exception number and any pertinent pictures associated with the damage. You can log into your account to file a Damage Claim or contact your Designer for assistance.

Delivery drivers will only offload your pallet(s) to the ground and will not unload your pallet or move the pallet to a location such as garage, so please ensure that you are prepared to unload the pallet and move them to a location you see fit.

DO NOT REFUSE ANY SHIPMENT

Damaged material or incorrect material should not be refused or sent back with the delivery driver. All damage claims are handled by WholesaleCabinets.US.

Inspecting: Once you have received all of your material, a thorough inspection should be done to ensure that there is no damage. Obvious damage should be reported right away along with a picture of the damage and a description of the damage. A Damage Claim must be filed for all claims. If you are unsure of how to file a claim, please contact your Designer.

Sometimes throughout the assembly process, hidden damage is detected. This is damage that was not noticed until the box was opened and the assembly process had already begun. If you notice hidden damage, please take a picture of the damage and make note of the cabinet/part. If the damage is a door or drawer, then proceed with the assembly process, as those items can be replaced after the cabinet has been installed if necessary. If the damage requires a replacement part to continue with assembly, please move on to the next cabinet. Once all cabinets have been assembled and inspected for damage, file a claim for all damage and include all appropriate pictures. This will ensure that all of the replacement parts ship at once.

Final Notes: A Touch Up Kit is recommended for all projects. This kit will contain a touch up stain or paint marker that matches your cabinets, as well as a touch up wax stick used to fill in nail holes or other blemishes that occur during normal wear and tear over the years.

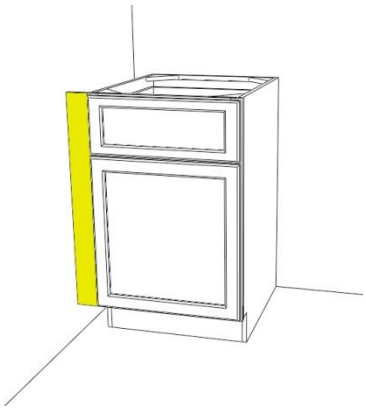

Thank you! WholesaleCabinets.US would like to thank you for putting your faith in us and for your purchase. We are very proud of our products, service and staff and are always striving to improve. We would like to hear about your buying experience, so please, let us know how we did. Your opinion matters!

Accessory Application

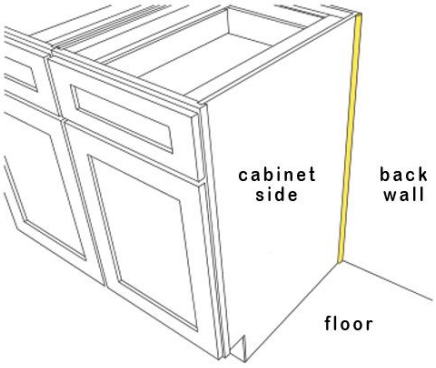

Walls, floors, and ceilings are rarely level, plumb, straight or square which is why we recommend using accessories to correct these imperfections. Below is a description of accessories that we offer and their uses.

Fillers

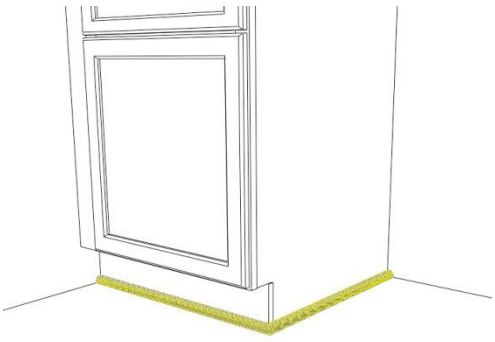

Fillers are used to fill the gap between the wall and cabinet. They come in 3” or 6” widths and are able to be trimmed in order to fit the space. Fillers are commonly used as horizontal decorative trim pieces or countertop support.
Note: *Fillers are required for most applications where a cabinet meets a wall to allow for proper clearance of doors and drawers.*

Scribe Molding

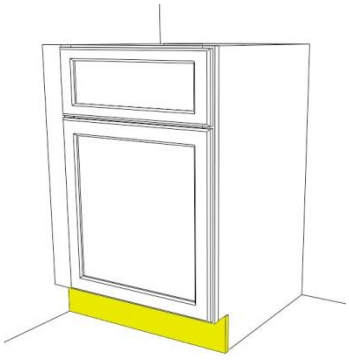

Scribe Molding is used along walls when there is a gap between the cabinet and wall that is too large to caulk.
Scribe Molding can also be used to trim the raw edges of shelves or other material that need to be cut to accommodate custom applications and is also commonly used at the end of Toe Kick runs to finish off the run.

Quarter Round

Quarter Round is used to hide gaps and shims that are used to level cabinets on uneven floors. It is also commonly used when new flooring, such as wood floors, are installed after the cabinets have been installed

Toe Kick

Toe Kick is a finished wood material that is placed on the bottom of the cabinets after they have been installed to hide the seams where two cabinets meet. Scribe Molding is commonly used (vertically) at the end of Toe Kick runs for a more finished look.
